

Data Contract Enforcer Report

Auto-generated — 2026-04-01 | Platform: sentinel-contracts

1. Data Health Score

 Your data platform is critically unhealthy at 0.0% — immediate action required.

Total checks	Passed	Failed	Warned
286	262	24	0

2. Violations This Week

CRITICAL: 5 | HIGH: 4

- The week3-document-refinery-extractions system's 'extracted_facts_confidence_max' field failed validation. This affects 100 records and 2 downstream system(s). Most likely caused by: 'data: add validation reports including violation detection run'.
- The week3-document-refinery-extractions system's 'extracted_facts_confidence_mean' field failed validation. This affects 100 records and 2 downstream system(s). Most likely caused by: 'data: add validation reports including violation detection run'.
- The week3-document-refinery-extractions system's 'extracted_facts_confidence_min' field failed validation. This affects 100 records and 2 downstream system(s). Most likely caused by: 'data: add validation reports including violation detection run'.

3. Schema Changes Detected

- [SAFE]** Field 'is_synthetic' changed from None to {'business_rule': 'value must be boolean (True/False)', 'description': 'Boolean flag indicating whether the extracted document or record was synthetically generated rather than being a real/original document', 'required': False, 'type': 'string'} (field added). No immediate action required.
- [BREAKING]** Field 'extraction_model' changed from integer to string (type changed). ACTION REQUIRED — downstream teams must update before deploying.
- [BREAKING]** Field 'token_count_input' changed from 0.0–1000.0 to 3099.0–7982.0 (range changed). ACTION REQUIRED — downstream teams must update before deploying.
- [SAFE]** Field 'doc_name' changed from None to {'business_rule': 'Must be a non-empty string; typically follows pattern of descriptive title with optional year suffix in format YYYY or YYYY-YY', 'description': 'Name or title of the document from which data was extracted, typically representing reports, audits, surveys or official publications with year identifiers', 'required': True, 'type': 'string'} (field added). No immediate action required.

[SAFE] Field 'processing_time_ms' changed from None to {'description': 'Column processing_time_ms', 'maximum': 59916.0, 'minimum': 8614.0, 'required': True, 'type': 'integer'} (field added). No immediate action required.

4. AI System Risk Assessment

ALERT: Text data meaning has drifted significantly (drift score 0.7778, threshold 0.15). The AI system may be processing a different type of content than it was designed for. LLM output schema violation rate is 0.0% and stable. No action required. All prompt input records passed schema validation.

Metric	Value	Status
Embedding drift score	0.7778	FAIL
LLM output violation rate	0.0%	PASS
Prompt inputs quarantined	0	PASS

5. Recommended Actions

#1 [CRITICAL] The week3-document-refinery-extractions system's 'extracted_facts_confidence_max' field failed validation. This affects 100 records and 2 downstream system(s). Most likely caused by: 'data: add validation reports including violation detection run'.

#2 [HIGH] Breaking schema change on field 'extraction_model'. ACTION REQUIRED — downstream teams must update before deploying. Review migration checklist in validation_reports/.

#3 [MEDIUM] AI system risk detected. Review ai_metrics.json and check recent data sources and prompt template changes.
